

To Whom It May Concern,

As General Manager of the Jockey Club Kau Sai Chau Public Golf Course, Hong Kong, I have no hesitation in recommending Solardrive canopies for all types of electric golf carts. The Golf Course is now in its third year of use with Solardrive technology which has been applied across the entire fleet of 205 golf carts, and more recently extended to our larger four and eight seater golf carts.

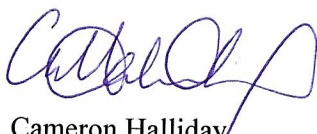

The direct benefits arising from the Solardrive installations have been significant, in particular the extended life-cycle of the golf cart batteries. The continuous charging cycle that the technology facilitates lengthens the life of the golf carts' batteries and reduces operating costs both in terms of replacement costs for batteries and the costs for waste disposal of lead acid batteries from our remote island location. We have also seen a significant reduction in the power consumption for charging the golf cart fleet thanks to the Solardrive canopies charging the batteries throughout their use during a round of golf. On sunny days the golf carts return to the golf cart centre still fully charged after 18 holes.

Equally important, the reduced waste volume and power consumption achieved through the use of the Solardrive canopies has ensured that the golf course is taking a leading role in the drive for sustainable management in golf.

Throughout this groundbreaking project we have found the Solardrive team to be extremely professional and proactive. Their focus has been entirely on customer satisfaction and we have no hesitation in recommending Solardrive for reducing operating costs and providing real environmental benefits.

Please feel free to contact me directly should you require any additional information or have any questions in relation to the above.

Sincerely,

Cameron Halliday  
General Manager
